

TAKACHI

IP68 DIECAST ALUMINIUM ENCLOSURE - DW series
IP68 HEATSINK DIECAST ALUMINIUM ENCLOSURE - DWH series

Certificate of Compliance – IP68

This document certifies that the products below are compliant to the conditions of the IP68* rating.

*IPX8 tests are conducted under conditions of immersion in water at one meter depth for 24 hours.

DW series

DWH series

Record

DW series Product No.	DWH series Product No.
DW-10-15-6W	DWH-10-15-6S
DW10-15-9W	DWH10-15-9S
DW14-22-7W	DWH15-22-7S
DW14-22-10W	DWH14-22-10

1. The product indicated in blue has passed the IP68 test conducted by a testing institution. Generally, as the enclosure size increases, the waterproofing and dustproofing capabilities drop. As the DW14-22-10W, the largest size of the DW series, has passed the IP68 test, TAKACHI considers that all sizes of the DW series have the same properties. Furthermore, as the DWH series has the same waterproofing structure as the DW series, we consider that all sizes of the DWH series also have the same IP68 properties.

*The difference between the DW series and the DWH series is the heatsink structure on the cover for the DWH series.

2. The IP68 properties will be lost if hole milling is performed on this product.
Please note that this certificate does not apply if hole milling is performed, or accessories such as connectors and switches are attached to the product.
3. If you wish to upload this certificate on your website, please contact the R&D Department at TAKACHI, describing the purpose of use. (Uploading without consent and/or partial reproduction of this document is strictly prohibited.)
